In industrial applications, 24 V DC is becoming the voltage of choice. Unlike other vendors, Siemens offers a wide range of options to complement its power supplies. In addition to the complete product range of 24 V DC power supplies – from 0.5 A to 40 A, and power supplies in 5 V, 12 V, 15 V and 48 V, Siemens also provides power security equipment:

- Buffer modules for sensitive processes to avoid the loss 24 V DC during short power outages or voltage fluctuations
- DC UPS if the process requires longer hold-up times
- Redundancy modules if the process requires a redundant power supply configuration
- SITOP select electronic diagnostic modules if the application has multiple load circuits and a shutdown of the circuit, affected by the short, is required

## Features and Benefits

### Compact size

High power density minimizes required panel space

### Worldwide standards and approvals

UL, cUL, and CE approvals are standard  
CSA and FM approvals are available with certain power supplies

### DIN rail mounting

Reduces panel assembly time

### High efficiency

Reduces the build-up of unwanted heat in the panel

### Secondary side short-circuit protection

No fusing required due to automatic crowbar function

### UL 508 Listed

Suitable for UL applications with 100% of the rated output current  
No derating necessary

### Single- and three-phase input

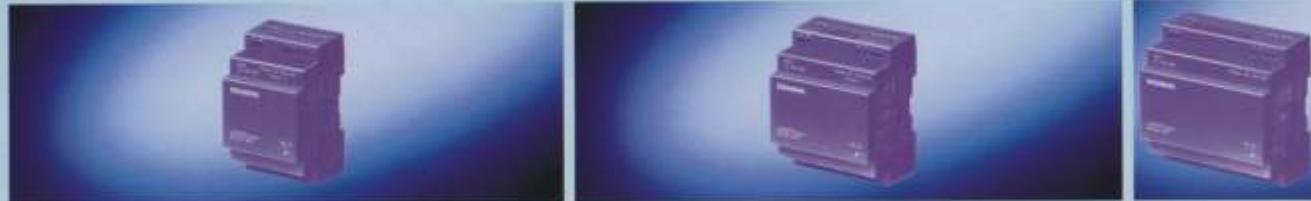

Broad offering of 24 V DC single-phase power supplies from 0.5 A up to 40 A  
Three-phase solutions (available from 5 to 40 A) eliminate the need for 480 V – 120 V control power transformer

### Power security add-on modules

Maximum protection with 24/7 reliability
